Graph - Take start & end point not linked to zooming in on the timeline editor Planning

- Joe Ponsford
- **Forum name:** #Suggestion

Thank you for adding the feature of the graph following when I want to fill gaps in, in Motive 2.0. However there is still a limitation of using the graph editor, when I zoom in to view the graph tangents it sets the start/end of the take if this could be removed and completely not assigned to the graph movement this would be very useful.

As I would like to be able to set the start and end of the take at the beginning of tracking and then it not changing when I move around in the graph.
